TITLE: *RECIPE SEARCH WITH INGREDIENT FILTER (API -BASED)*

GITHUB LINK : *<https://github.com/mkala6049-sketch/TNCDS-FWD-DPI>*

1. ABSTRACT

The Recipe Search with Ingredient Filter is a web-based application designed to help users find recipes based on ingredients available at home. Many people struggle to decide what to cook with limited ingredients. This application uses an API to fetch recipe data, allows ingredient-based searching, displays recipe details, and shows a message when no recipes are found. It makes cooking easier and reduces food waste.

2. PROBLEM STATEMENT

Traditional recipe searching has problems such as:

Difficult to find recipes quickly

Users may not know suitable dishes for available ingredients

Searching multiple websites wastes time

Sometimes no suitable recipes are found

A smart filtering system is needed to solve this problem.

3. OBJECTIVES

Main objectives:

Search recipes using API

Filter recipes by ingredient

Display recipe details

Show message if no recipe found

Make cooking decisions easier

Save user time

4. PROJECT SCOPE

The Recipe Search with Ingredient Filter helps users find recipes using available ingredients. It fetches recipe data through an API, displays matching recipes, and provides quick cooking suggestions. The system is simple, user-friendly, and useful for everyday cooking.

5. TECHNOLOGIES USED

Technology

Purpose

HTML

Structure

CSS

Styling

JavaScript

Logic

API

Fetch recipe data

github.com 

Project hosting

6. APPLICATION FLOW

Flow:

Start

↓

User enters ingredient

↓

Send request to API

↓

Fetch recipe data

↓

Check if recipe exists

↓

Display recipe details

↓

If no result → Show message

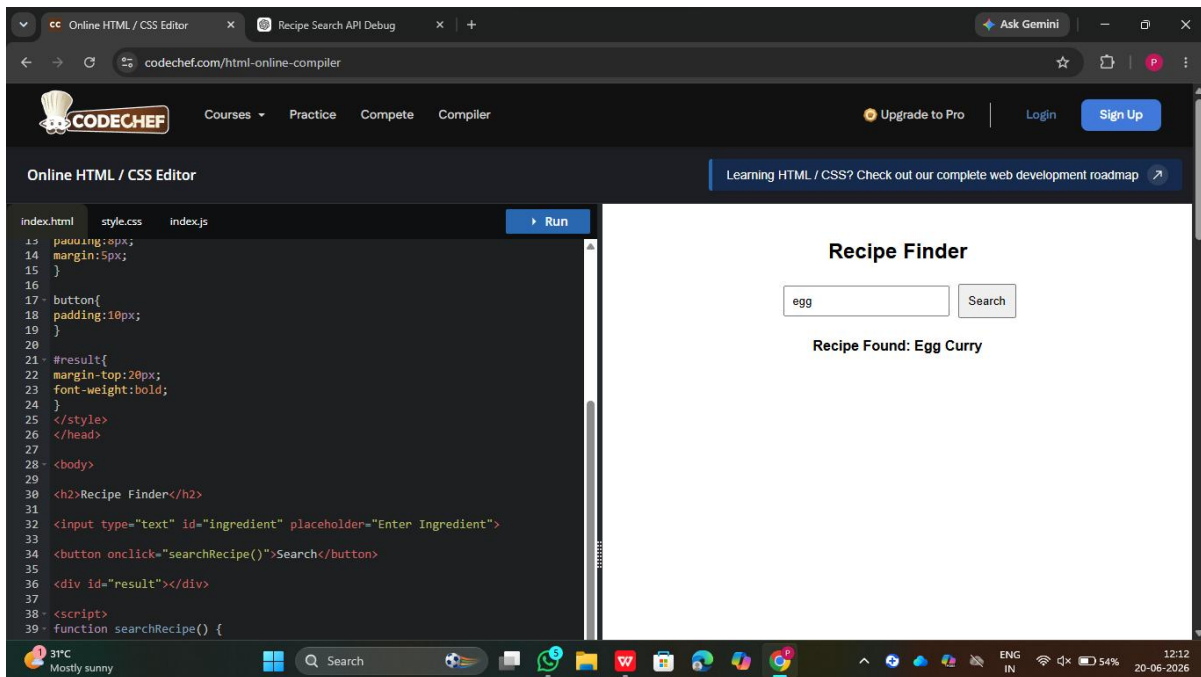

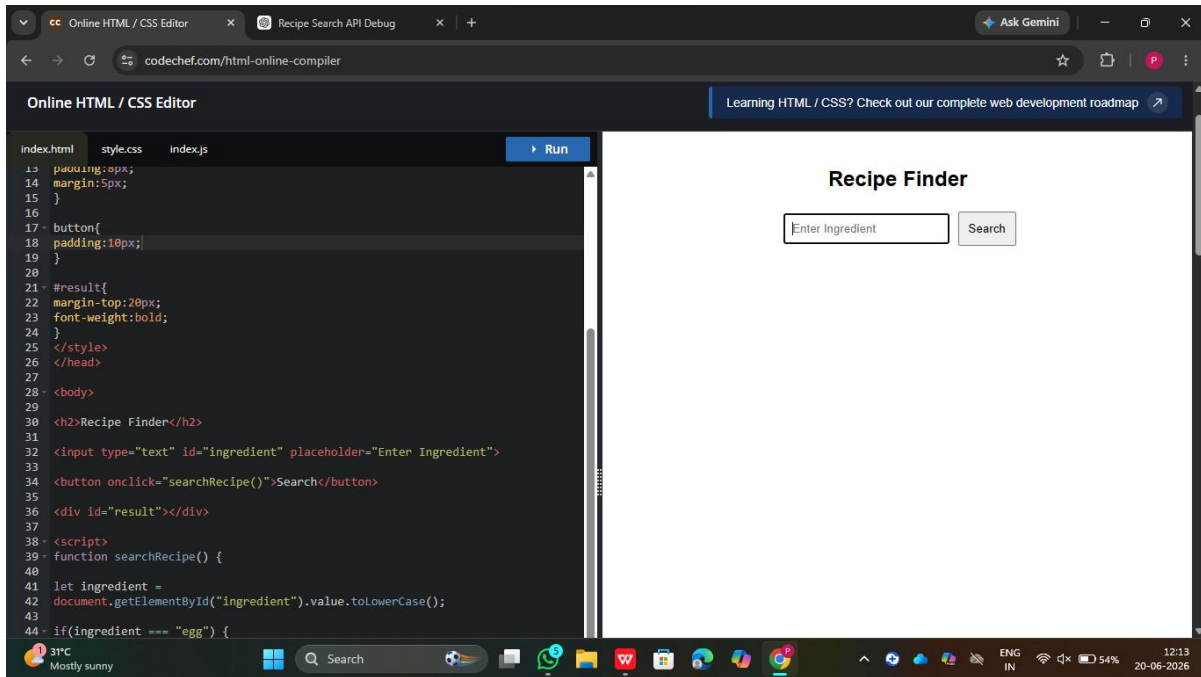

↓

End

7. KEY REACT CONCEPTS USED

- Components for UI design
- State for managing data
- Props for passing information
- Event Handling for user actions
- API Fetching for recipe data retrieval
- Conditional Rendering for displaying results or messages

8. EXPECTED OUTPUT

9. CHALLENGES FACED

- Handling API responses correctly
- Managing user input validation
- Displaying accurate search results
- Handling cases when no recipes are found
- Improving user experience and interface design

10. LEARNING OUTCOMES

- Learned API integration for fetching recipe data
- Improved HTML, CSS, and JavaScript skills
- Understood ingredient-based filtering techniques
- Gained knowledge of user-friendly web design
- Learned how to handle search results and errors
- Improved problem-solving and web development skills

11. CONCLUSION

The Recipe Search with Ingredient Filter project helps users find recipes easily using available ingredients. By using API-based searching, the application gives quick recipe suggestions and improves cooking convenience. It is simple, efficient, and useful for everyday cooking.

12. CODING

HTML

```
<!DOCTYPE html>
<html>
<head>
<title>Recipe Search</title>
</head>
<body>

<h2>Recipe Finder</h2>

<input type="text" id="ingredient" placeholder="Enter Ingredient">

<button onclick="searchRecipe()">Search</button>

<div id="result"></div>

<script src="script.js"></script>

</body>
</html>
```

Page 9 – CSS + JavaScript Code

CSS

```
body{
font-family: Arial;
text-align:center;
```

```
margin:40px;  
}
```

```
input{  
padding:8px;  
margin:5px;  
}
```

```
button{  
padding:10px;  
}
```

JavaScript

```
function searchRecipe(){
```

```
let ingredient =  
document.getElementById("ingredient").value;
```

```
if(ingredient=="egg"){  
document.getElementById("result").innerHTML =  
"Recipe Found: Egg Curry";  
}  
else{  
document.getElementById("result").innerHTML =  
"No Recipe Found";  
}  
}
```
